TOUGH TESTING, TRUSTED RATINGS

## PULSE

### Livescribe

[www.livescribe.com](http://www.livescribe.com)

**Price:** \$149.95 (1GB); \$199.95 (2GB)

**Requirements:** Pen requires dot paper and USB to charge. Livescribe Desktop software requires 600MHz or faster Intel processor, Mac OS 10.5.5 or later.

➤ Pen and headphones capture 3D audio and link it to the notes you make on the dot paper. Pen contains other apps like a recorder, calculator, and toy piano. Print your own dot paper (600 dpi printer required). Livescribe Desktop software lets you search your notes and share them.

➤ No OCR to translate your written notes to plain text. Livescribe Online glitchy for Mac users.

The Pulse pen is nicely weighted and fun to write with, but the real magic is in the Livescribe Desktop app.
